

Oxyzone Silver Harvest

This rugged, powerful range of UV ozone generators can be operated independently or centrally controlled. The Silver Harvest range of UV ozone generators have been designed for post harvest storage. They are ideal for use in the food and produce cool room environment.

The high output option offers large HO UV lamps and a higher capacity fan.

Quick and Easy Control

Until now the control of ozone units in cool rooms has been difficult due to access restrictions. At Oxyzone we have the product and the flexibility to meet your needs.

Additional Features

Oxyzone has developed a system of controlling the ozone output in a cool room by interconnecting Silver Harvest units to a single central control source.

- **S29C Harvest Control:** The UV ozone generators can have all units off, 1 UV lamp on or 2 UV lamps on at the touch of a switch or by the integrated timer.
- **Automatic Sensor level:** We can apply a specific level of ozone in the room by connecting an ozone sensor to the standard control unit.
- **S29W Wireless Control Module:** Our convenient Bluetooth wireless control can be added to the standard control system (no hard wiring).

The combination of machines can be a mixture of single and double standard or High Output units.

Oxyzone has the best ozone solution for your post harvest needs.

100% Australian Made and Manufactured

Oxyzone products are designed and manufactured in Australia to comply with electrical and safety standards. Our service personnel and our spare parts are also in Australia.
